## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "at least two signal paths" (Claim 1, 19, and 20), "at least two signal paths electrically connected to each other" (Claim 2), "a see-saw structure, a cantilever with more than one pedestal and membrane" (Claim 3), and "more than one micro-switch is formed when .... two substrates are bonded" (Claim 16) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Specification***

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: "at least two signal paths is electrically connected to each other" is not found in the specification.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 2, 5, and 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 2, "said" should be inserted after "wherein". Claim 5 is incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: the relationship between the recited "electrical contact" and the elements recited in the parent claim. In Claim 6, antecedent basis is lacking for "said two substrates". Claims 7-8 inherit the defect in their parent claim.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-5, 11, 14, 16, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Kellam, et al., cited on Applicant's IDS.

Kellam, et al., in col. 3, lines 60-63, discloses a plurality of relays (inherently resulting in at least two signal paths [16a,b,c]), a plurality of substrates (11,12), metal seal ring 13 and deposited metal layers 21, movable cantilever structure 15, and electromagnetic actuator 28.

***Claim Rejections - 35 USC § 103***

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 6-10, 12, 13, 15, and 17 rejected under 35 U.S.C. 103(a) as being unpatentable over Kellam, et al..

The Examiner takes official notice of the equivalence or obviousness of employing a gold thermocompression bonding process, providing an optimum seal ring width, employment of gold/barrier layer bonding surfaces, and providing mechanical bonding stops.
